OPTOCORE'S LIMITED EDITION OFFER ON NEW-GENERATION NETWORK CONVERTERS

Optocore, pioneers in fibre-optic based audio and data network distribution, are stimulating sales of their new 'R' series converters with a special limited edition offer on transceivers for new customers.

The new series already offers increased featureset and efficiency, reduced carbon footprint and a substantial decrease in cost over the models they have replaced — but Optocore are sweetening the deal further for a limited period only by offering the superior 1Gbps SM Transceivers at the same price as the 1Gbps MM Transceivers.

Says International Sales & Marketing Manager, Mark Davidson, "By taking advantage of this promotion, which runs until the end of September, customers can guarantee superior performance from the upgraded media converters at no additional cost when purchasing our new 'R' Series DD32R interfaces, DD4MR-FX / DD2FR-FX MADI, video and data network devices, X6R-FX converters and YG2 Yamaha interfaces."
